Nike Box M/SK - new sport and cultural center designed by KOSMOS Architects and Steika KB

Context of the site - Moscow and Gorky Park

In recent years, Moscow has witnessed a tremendous development in terms of the city's green and public space. One of the key catalysts for architectural innovation and experimentation is Gorky Park where the new sports center Nike BOX M/SK is located.

Gorky Park, Moscow's Central Park, was initially designed as an exhibition of industrial achievements, and since then has always been a place for the most experimental and cutting-edge architecture. Most noticeable examples of recent years - Garage Museum by OJIVA and Singur Bar, are located right next to the site of new Nike BOX M/SK. Besides art, culture and leisure, Gorky Park has always been popular for those who like sports and active lifestyle. One of the best places for morning jogging or yoga in the park.

Nike Box M/SK is built to further enhance sport infrastructure of the park and help promote sport and active lifestyle among park visitors and Moscow residents.

4700-square-meter site will be open all year around and provide free access to sport facilities and coaching. Box M/SK includes outdoor football and streetball courts, indoor and outdoor spaces for training and yoga. It will also serve as the base for Moscow's Nike Running Club.

Box M/SK will also grow into a hub for creativity, culture and self-expression through curated programming and partnerships.

Image and inspiration: new technologies and local context

The image of Box M/SK embraces several various themes and inspirations. The overall image of the building refers to anonymous Utilarian and Infrastructural architecture; transparency and modularity of the building takes inspiration from membranes and their technologies.

From the other hand, the project is inspired by the local Russian context: rough and brutal districts of panel-modernist houses, and the traditional "Kortokai" (Box in Russian) is a courtyard playground, caged by protective fences, is a typical urban detail of any periphery of a Russian city, introduced in the absence of other urban places to play. "Kortokai" symbolizes the minimal infrastructure necessary for sports and the rough, yet romantic, street sport culture.

Architecture

The appearance of the building is defined by its 5 main design impulses: transparency, openness, activation of the whole site, integration in the park, and inspiration for sports.

"Naked" structure gives the building its bold, futuristic aesthetics of "sports structures". Transparent facade and open plan provide openness of the building and integrate it in the park's greenery. "Naked" facade activates the whole site, allow people to use the rooftop and differentiate the activities on the sides of the building. Vivid magenta landscape and interiors give energy and inspire for sports achievements.

The facade with its 3-dimensional metal lattice functions as a membrane between interior space and the park, letting inside the air, the light and the people flows. "Naked" structure of BOX M/SK is see-through and transparent and reveals all the processes inside, even the MEP room with all its installations and cores is completely visible from the street.

Besides creating visual transparency, the openwork frame allows the trees to freely grow through the building, which allows integrating the structure in the park without harming nature. On sunny days the building's facade provides sun protection and cools the landscape around the facade with intricate ornamental shadows.

The whole site around the building is a continuous playground. It is covered with magenta red sportie rubber and it incorporates sport fields, trees, and hills of spectator seats. The rubber continues inside the building as well, creating a unified experience both inside and outside the building.

Another important public space, besides the magenta playground landscape, is the rooftop of Nike BOX M/SK. In order to maximize the space for public activity, and give back to the park the whole footprint of the building, it was designed as an accessible space where yoga classes, public announcements, emotions and games can take place.

Plan and organization of the interior space

Simple square plan of the building is divided into 4 clear parts: entrance hall, multi-purpose hall, dressing rooms/closet zone, utility block. The layout is organized by two intersecting corridors, which create a cross-shaped free path, visually connecting the interior with the exterior and allowing people to circulate inside-out freely.

Transformable canton enables to utilize the entrance hall and the multi-purpose hall for specific events, while transparent walls of the facade visually unite the interior with the surrounding park.
